DETAILED ACTION

1. Claims 1-20 are in the application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5-8, 10-14, 16, and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krautkremer et al in view of North.

Krautkremer discloses a method and apparatus for maneuvering a marine vessel comprising the steps of providing first and second marine propulsion units; receiving a maneuver command from a manually controllable device and apparatus for calculating the magnitude of thrust as a function of the maneuvering command. Although Krautkremer teaches that the propulsion units can be mounted in front or behind the center of lateral resistance, Krautkremer does not teach the mounting of the propulsion units attachable to the transom. North discloses an arrangement of propulsion units mounted on the transom and used for propulsion of the watercraft and also for maneuvering the watercraft. In view of these disclosures it would have been obvious to one skilled in the art to mount the propulsion units of the arrangement in Krautkremer on the transom of the watercraft in an arrangement generally as taught by North.

Art Unit: 3617

The use of outboard motors in lieu of stern drives would have been an obvious extension of the teachings of North.

4. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Krautkremer in view of North as applied to claim 11 above, and further in view of Ito et al.

Ito et al discloses an apparatus for controlling multiple engines for maneuvering a ship, wherein the apparatus includes a joystick and a microprocessor.

In view of these disclosures, it would have been obvious to one skilled in the art to use a joystick and microprocessor to control the propulsion units, generally as taught by Ito et al.

The use of a microprocessor and electronic circuits would have been desirable in the arrangement of Krautkremer to simplify the controls.

Allowable Subject Matter

5. Claims 4, 9, and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

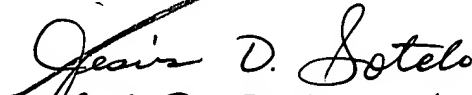

Rieben is cited as showing apparatus and method for maneuvering a marine craft including the use of a joystick.
